

## VFC Sync 2MHz 16-Pin CDIP Tube

Manufacturer: Analog Devices, Inc

Package/Case: DIP

**Product Type:** Data Conversion ICs

Lifecycle: NRND

Images are for reference only

Inquiry

## **General Description**

The AD652 uses a variation of the popular charge-balancing technique to perform the conversion function. The AD652 uses an external clock to define the full-scale output frequency, rather than relying on the stability of an external capacitor. The result is a more stable, more linear transfer function, with significant application benefits in both single and multichannel systems.

Gain drift is minimized using a precision low drift reference and low TC on-chip thin-film scaling resistors. Furthermore, the initial gain error is reduced to less than 0.5% by the use of laser-wafer-trimming.

The analog and digital sections of the AD652 have been designed to allow operation from a single-ended power source, simplifying its use with isolated power supplies.

The AD652 is available in five performance grades. The 20-pin PLCC packaged JP and KP grades are specified for operation over the  $0^{\circ}$ C to  $+70^{\circ}$ C commercial temperature range. The 16- pin cerdip-packaged AQ and BQ grades are specified for operation over the  $-40^{\circ}$ C to  $+85^{\circ}$ C industrial temperature range, and the AD652SQ is available for operation over the full  $-55^{\circ}$ C to  $+125^{\circ}$ C extended temperature range.

## **Key Features**

Full-scale frequency (up to 2MHz) set by external system clock

Extremely low linearity error (0.005% maximum at 1MHz FS, 0.02% maximum at 2MHz FS)

No critical external components required

Accurate 5V reference voltage

Low drift (25ppm/°C maximum)

Dual- or single-supply operation

Voltage or current input
