

Resolver to Digital 16bit Parallel ± 22 arcmin 44-Pin PLCC Tube

Manufacturer:	Analog Devices, Inc
Package/Case:	PLCC
Product Type:	Data Conversion ICs
RoHS:	RoHS Compliant/Lead free 
Lifecycle:	NRND

General Description

The converter allows users to select their own resolution and dynamic performance with external components. This allows the users great flexibility in defining the converter that best suits their system requirements. The converter allows users to select the resolution to be 10, 12, 14, or 16 bits [AD2S81A allows 12 bit resolution only] and to track resolver signals rotating at up to 1040 revs per second (62,400 rpm) when set to 10-bit resolution. The AD2S80A/AD2S81A/AD2S82A series converts resolver format input signals into a parallel natural binary digital word using a ratiometric tracking conversion method. This ensures high noise immunity and tolerance of long leads allowing the converter to be located remote from the resolver. The AD2S80A/AD2S81A/AD2S82A series operates over reference frequencies in the range 50 Hz to 20,000 Hz.

Key Features

- Monolithic (BiMOS II) tracking R/D converter
- Low power consumption
- Dynamic performance set by user
- High max tracking rate
- VCO output
- Data complement facility

Application

- DC Brushless and AC Motor Control
- Process Control
- Numerical Control of Machine Tools
- Robotics
- Axis Control
- Military Servo Control
